PROJECTS

Transmission Line Fault Detection Model — May 2024 – Jul 2024
Hardware prototype | Flame sensor, relay module, AC bulbs, PVC transmission-line model

- Built a working prototype that detects faults on a transmission line using sensor-driven fault identification.
- Integrated a flame sensor with a relay module to detect fault conditions and trigger relay-based switching of the connected AC bulb load.

Automatic Temperature Controlled Fan (Arduino Uno) — Academic Project
Tinkercad simulation | Arduino Uno, TMP36, NPN Transistor, DC Motor, Embedded C++

- Programmed an Arduino Uno to read a TMP36 sensor and switch a DC fan ON at 30 °C through an NPN transistor.
- Verified in simulation: fan OFF at 24.78 °C and ON at 30.16 °C, with live readings on the Serial Monitor.

Sales Data Analysis Project
Academic project | MS Excel, Google Sheets, Pivot Tables, AI Tools

- Analysed sample sales data with Pivot Tables and charts, improving data organisation and reporting accuracy.
